# World's 10 Largest Countries in Population

**2007**

Country	Population (millions)
China	1,318
India	1,132
United States	302
Indonesia	232
Brazil	189
Pakistan	169
Bangladesh	149
Nigeria	144
Russia	142
Japan	128

**2050**

Country	Population (millions)
India	1,747
China	1,437
United States	420
Indonesia	297
Pakistan	295
Nigeria	282
Brazil	260
Bangladesh	231
Dem. Rep. of Congo	187
Philippines	150

## Developing Countries With the Highest and Lowest Shares of Children Under Age 5 Who Are Underweight

**Highest**

Country	Percent
Afghanistan	46
India (under age 3)	46
Yemen	46
Niger	44
Bangladesh	43
East Timor	41
Burundi	39
Nepal	39
Sudan	38
Madagascar	37

**Lowest**

Country	Percent
Grenada	< 1
Chile	1
Antigua and Barbuda	2
Argentina	2

Afghanistan	42
Central African Republic	43
Mozambique	43

# WORLD POPULATION HIGHLIGHTS

## Levels of Income Inequality Vary Around the World.

The Gini index is the most common measure of income inequality. It is constructed so that zero corresponds to perfect income equality (that is, everyone has the same income), while 100 corresponds to perfect income inequality (that is, one person has all the income while everyone else has none). The median value of the Gini index across the world's countries is 39.

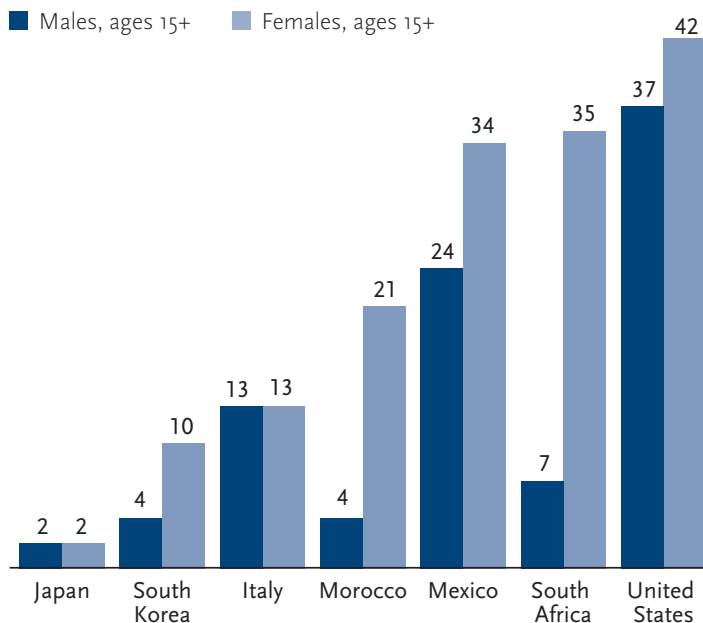

The United States has a Gini index of 41, above the level of most industrialized countries and reflecting its greater income inequality. Among developing countries, the Gini index varies from below 40 (India, Burkina Faso) to above 50 (Zambia, Bolivia). Greater income inequality is associated with weakened social cohesion and worse health status. Income inequality appears to increase, at least in the short term, in countries that are innovating and growing rapidly economically. Countries can influence their levels of income inequality through policies affecting taxation, public transfer programs, education, and migration.

Gini Index of income distribution

Percent of adults who are obese (2005)

## Long a Problem in Industrialized Countries, Obesity Is a Problem in the Developing World.

Globally, at least 1 billion adults are overweight (body mass index, or BMI, exceeding 25), with about 300 million of those adults considered obese (BMI of 30 or greater). While obesity has long been a problem in industrialized countries, levels are rising in many developing countries as well. For example, one-fourth of Mexican men and one-third of Mexican women are considered obese. Similarly, obesity rates are 21 percent for Moroccan women and 35 percent for South African women—significantly greater than the rates for women in many industrialized nations.

## Foreign-Born Populations Are Rising in Both Industrialized and Developing Countries.

Much press has been given to the increase in immigration in the industrialized world—most of which has come from developing countries. The United States and Canada, for example, both have long traditions of immigration, while many countries in western Europe have seen the influx of migrants from both former colonies in Asia and Africa (to the Netherlands) and eastern Europe (to Ireland). Less well known, however, is that several countries in the developing world have seen a rise in their foreign-born populations. Costa Rica, for example, has long attracted refugees escaping civil strife in nearby countries, and more recently has been a destination for Nicaraguans and Panamanians seeking seasonal work. Botswana provides another case in point, as it has attracted both refugees and economic migrants from its neighbors in southern Africa.

## Among Women in Developing Countries, More Education Often Leads to Lower Fertility.

A large body of research over the years has linked higher education for women and girls with reduced fertility levels. Indeed, recent data from many countries have shown that women with at least a secondary-level education eventually give birth to one-third to one-half as many children as women with no formal education. In some of these countries, the fertility of these well-educated women approaches replacement level. Better-educated women are able to delay marriage and exercise more control over their reproductive lives, including decisions about childbearing.

Lifetime births per woman by highest level of education

## Urbanization Has Grown Dramatically Since the 1970s.

As recently as 1975, one in three persons worldwide lived in urban areas, with most of those 1.5 billion urbanites living in areas of fewer than 1 million persons. (Many urban dwellers, in fact, live in communities of fewer than 5,000 residents.) Over the past 30 years, the urban population has increased so that more than half of the world population will be living in cities by 2008. Parallel to this overall urban growth (and the continued rise of smaller cities) is the emergence of “mega-cities”—urban areas of at least 10 million persons. Between 1975 and 2005, the number of such large cities has mushroomed from three (two of which were in industrialized countries) to 20 (15 of which are in developing countries).

**SOURCE:** United Nations Population Division, *World Urbanization Prospects: The 2005 Revision* (2006).

## Iron-Deficiency Anemia Remains a Problem in Many Parts of the Developing World.

Nearly three in five children under age 5 live in countries where anemia is a severe public health problem. The prevalence is most severe in Africa and Asia, where in some countries, more than 40 percent of preschool-age children have moderate or severe anemia (hemoglobin levels below 10 grams per deciliter). High rates of iron-deficiency anemia in young children are particularly worrisome because the lack of sufficient iron in their diet hinders their growth and cognitive development. In addition, iron deficiency affects pregnancy outcomes and reduces work productivity, and severe iron-deficiency anemia increases the probability of disability and death among women of childbearing age.

Percent of children under age 5 with iron-deficiency anemia

## Population Aging Is Occurring Worldwide.

Over the past half-century, both the worldwide drop in fertility and concurrent rise in life expectancy have led to the gradual aging of the world's population. Since 1950, the share of persons ages 65 and older has risen from 5 percent to 7 percent worldwide. As the map shows, Europe and Japan have led the way, with North America, Australia, and New Zealand close behind. However, older persons are now more than 5 percent of the inhabitants in many developing countries and by 2050 are expected to be 19 percent of Latin America's population and 18 percent of Asia's.

	Percent of Persons Ages 65 and Older

#### NOTES

(—) Indicates data unavailable or inapplicable.

z Rounds to zero.

a Infant deaths per 1,000 live births. Rates shown with decimals indicate national statistics reported as completely registered, while those without are estimates from the sources cited on reverse. Rates

shown in italics are based upon fewer than 50 annual infant deaths and, as a result, are subject to considerable yearly variability.

b Average number of children born to a woman during her lifetime.

c Child under age 3.

d Special Administrative Region.

e The former Yugoslav Republic.

f Data are for the former Serbia and Montenegro.

\* Data prior to 2001 are shown in italics.

Data prepared by PRB demographer Carl Haub.

# Acknowledgments, Notes, Sources, and Definitions

## Acknowledgments

The author gratefully acknowledges the valuable assistance of PRB staff members Lori Ashford, Donna Clifton, Sara Maki, Zuali Malsawma, and Kelvin Pollard; staff of the International Programs Center of the U.S. Census Bureau; the United Nations (UN) Population Division; the Institut national d'études démographiques (INED), Paris; and the World Bank in the preparation of this year's *World Population Data Sheet*. This publication is funded by the William and Flora Hewlett Foundation, the David and Lucile Packard Foundation, the U.S. Agency for International Development (Cooperative Agreement GPO-A-00-03-00004-00), and supporters.

The information in this data sheet was not provided by and does not represent the views of the United States government or the USAID.

## Notes

The *Data Sheet* lists all geopolitical entities with populations of 150,000 or more and all members of the UN. These include sovereign states, dependencies, overseas departments, and some territories whose status or boundaries may be undetermined or in dispute. **More developed regions**, following the UN classification, comprise all of Europe and North America, plus Australia, Japan, and New Zealand. All other regions and countries are classified as **less developed**.

**Sub-Saharan Africa:** All countries of Africa except the northern African countries of Algeria, Egypt, Libya, Morocco, Tunisia, and Western Sahara.

**World and Regional Totals:** Regional population totals are independently rounded and include small countries or areas not shown. Regional and world rates and percentages are weighted averages of countries for which data are available; regional averages are shown when data or estimates are available for at least three-quarters of the region's population.

*World Population Data Sheets* from different years should **not be used as a time series**. Fluctuations in values from year to year often reflect revisions based on new data or estimates rather than actual changes in levels. Additional information on likely trends and consistent time series can be obtained from PRB, and are also available in UN and U.S. Census Bureau publications.

## Sources

The rates and figures are primarily compiled from the following sources: official country statistical yearbooks and bulletins; *United Nations Demographic Yearbook, 2003* of the UN Statistics Division; *World Population Prospects: The 2006 Revision* of the UN Population Division; *Recent Demographic Developments in Europe, 2005* of the Council of Europe; and the data files and library resources of the International Programs Center, U.S. Census Bureau. Other sources include recent demographic surveys such as the Demographic and Health Surveys, Reproductive Health Surveys, special studies, and direct communication with demographers and statistical bureaus in the United States and abroad. Specific data sources may be obtained by contacting the author of the *2007 World Population Data Sheet*.

For countries with complete registration of births and deaths, rates are those most recently reported. For more developed countries, nearly all vital rates refer to 2005 or 2006.

For a full list of PRB publications available in English, French, Spanish, Arabic, and Portuguese, go to PRB's online store at [www.prb.org](http://www.prb.org).

To order PRB publications (discounts available for bulk orders):

- Fax: 202-328-3937.
- Mail: 1875 Connecticut Ave., NW, Suite 520, Washington, DC 20009.

The *2007 World Population Data Sheet* is also available in French and Spanish.

## Definitions

### Mid-2007 Population

Estimates are based on a recent census, official national data, or UN and U.S. Census Bureau projections. The effects of refugee movements, large numbers of foreign workers, and population shifts due to contemporary political events are taken into account to the extent possible.

### Birth and Death Rate

The annual number of births and deaths per 1,000 total population. These rates are often referred to as "crude rates" since they do not take a population's age structure into account. Thus, crude death rates in more developed countries, with a relatively large proportion of high-mortality older population, are often higher than those in less developed countries with lower life expectancy.

### Rate of Natural Increase (RNI)

The birth rate minus the death rate, implying the annual rate of population growth without regard for migration. Expressed as a percentage.

### Net Migration

The estimated rate of net immigration (immigration minus emigration) per 1,000 population for a recent year based upon the official national rate or derived as a residual from estimated birth, death, and population growth rates. Migration rates can vary substantially from year to year for any particular country.

### Projected Population 2025 and 2050

Projected populations based upon reasonable assumptions on the future course of fertility, mortality, and migration. Projections are based upon official country projections, series issued by the UN or the U.S. Census Bureau, or PRB projections.

### Infant Mortality Rate

The annual number of deaths of infants under age 1 per 1,000 live births. Rates shown with decimals indicate national statistics reported as completely registered, while those without are estimates from the sources cited above. Rates shown in italics are based upon fewer than 50 annual infant deaths and, as a result, are subject to considerable yearly variability.

### Total Fertility Rate (TFR)

The average number of children a woman would have assuming that current age-specific birth rates remain constant throughout her childbearing years (usually considered to be ages 15 to 49).

### Population Under Age 15/Age 65+

The percentage of the total population in these ages, which are often considered the "dependent ages."

### Life Expectancy at Birth

The average number of years a newborn infant can expect to live under current mortality levels.

### Percent Urban

Percentage of the total population living in areas termed "urban" by that country. Typically, the population living in towns of 2,000 or more or in national and provincial capitals is classified "urban."

### Percent of Adult Population Ages 15 to 49 With HIV/AIDS

The estimated percentage of adults living with HIV/AIDS in 2005/2006. Data are from UNAIDS' *2006 Report on*

*the Global AIDS Epidemic* and recent Demographic and Health Surveys.

### Contraceptive Use

The percentage of currently married or "in-union" women of reproductive age who are currently using any form of contraception.

"Modern" methods include clinic and supply methods such as the pill, IUD, condom, and sterilization. Data are from the most recently available national-level surveys, such as the Demographic and Health Surveys, Reproductive Health Survey programs, and the UN Population Division *World Contraceptive Use 2005*. Other sources include direct communication with national statistical organizations and the U.S. Census Bureau. Data refer to some point in the 1990s and early 2000s. Data prior to 2001 are shown in italics.

### GNI PPP per Capita, 2006 (US\$)

GNI PPP per capita is gross national income in purchasing power parity (PPP) divided by midyear population. GNI PPP refers to gross national income converted to "international" dollars using a purchasing power parity conversion factor. International dollars indicate the amount of goods and services one could buy in the United States with a given amount of money. Data are from the World Bank. Figures in italics are for 2004 or 2005.

### Percent of Children Under 5 Who Are Underweight

The share of children under age 5 whose weight is 2 or more standard deviations below the median weight for their particular age, according to the World Health Organization Child Growth Standards. Source: World Health Organization Global Database on Child Growth and Malnutrition, accessed online at [www.who.int/nutgrowthdb/database/en/](http://www.who.int/nutgrowthdb/database/en/), on June 27, 2007, and supplemental data from national surveys.

### Carbon Dioxide Emissions per Capita

The amount of carbon dioxide, in metric tons, produced or emitted per person in a country or region. (A metric ton is equivalent to 1,000 kilograms.) The data shown here include all carbon dioxide produced through the combustion of solid, liquid, or gaseous fuels, or through the manufacturing of cement. Emissions produced through land use conversion or from bunker fuels used in international transportation are not included. Source: World Resources Institute, EarthTrends database, accessed online at [www.earthtrends.wri.org](http://www.earthtrends.wri.org), on June 27, 2007.

### Percent of Natural Habitat Remaining

The share of the land area in a country or region that has *not* been converted to human use. Land converted to human use includes land devoted to agriculture, roads, railroads, cities, and towns. Although the data shown here indicate the amount of habitat remaining, they do not represent actual biodiversity. Many large areas of remaining natural land nonetheless have been stripped of all animal wildlife. Source: Michael D. Jennings, *Gross Amount of Habitat Lost by Country* (Moscow, Idaho: The Nature Conservancy, 2007).

The **POPULATION REFERENCE BUREAU** informs people around the world about population, health, and the environment, and **empowers** them to use that information to **advance** the well-being of current and future generations.

## inform

PRB informs people around the world and in the United States about issues related to population, health, and the environment. To do this, we transform technical data and research into accurate, easy-to-understand information.

**Innovative Tools.** PRB's wallcharts, including the *World Population Data Sheet* and the *Map of Persistent Child Poverty in the U.S.*, are searchable via our DataFinder web tool and make accurate demographic information accessible to a wide audience.

**Influential Reports.** Health workers in the developing world use PRB's report on cervical cancer prevention, created in collaboration with the global health nonprofit PATH, to design successful screening programs. PRB and the Russell Sage Foundation published *The American People: Census 2000*, 14 reports that describe America in the year 2000.

**Unbiased Policy Analysis.** For more than 20 years, PRB has hosted a monthly seminar series focused on the policy implications of population issues including the color line in American society and HIV/AIDS in India.

**Online Resources.** PRB's website offers full text of all PRB publications, including our respected *Population Bulletins* and web-exclusive data and analysis on world issues ranging from aging to family planning. Our Center for Public Information on Population Research puts new population research findings into context for journalists and policymakers.

## empower

PRB empowers people—researchers, journalists, policymakers, and educators—to use information about population, health, and the environment to encourage action.

Information alone can be powerful. Frequently, however, people have knowledge but lack the tools needed to communicate it effectively to decisionmakers. PRB builds coalitions and conducts trainings in the United States and throughout the developing world to share techniques to inform policy.

**Journalist Networks.** Since 1996, PRB has shared techniques for fact-based, reproductive health reporting with a network of West African editors. The Pop'Médiafrrique program, one of several PRB journalist networks, has improved news coverage and increased demand for family planning in the region.

**Policy Communications Training.** Over the past five years, PRB has trained nearly 500 advocates, health professionals, and government workers in Asia, Africa, and Latin America. For example, participants in a workshop in Madagascar learned how to develop a fact sheet for policymakers to explain the complex linkages between population, health, and the environment.

**Data Workshops.** PRB's data workshops assist the Annie E. Casey Foundation's KIDS COUNT network in using vital data about the status of children in the United States. Workshop participants take away the knowledge needed to access data about their particular state and communicate with policymakers.

## advance

PRB works to advance the well-being of current and future generations. Toward that end, we analyze data and research, disseminate information, and empower people to use that information in order to inform policymaking.

While the numbers of publications created or workshops conducted are one way to measure PRB's work, the creation of evidence-based policies, increased demand for health services, and active coalitions are better gauges of progress toward positive social change.

**Evidence-Based Policies.** PRB provides analysis for the *KIDS COUNT Data Book*, an annual report card on the well-being of children and families in the United States, that has helped promote the passage of several U.S. policies, including the State Children's Health Insurance Program.

**Increased Demand for Health Services.** Information broadcast by women radio journalists who attended PRB's reproductive health workshop in Senegal has increased local demand for family planning and health services.

**Active Coalitions.** PRB worked with local groups in the Philippines to establish a national coalition that helps decisionmakers understand the impact of population on the environment through events such as an International Earth Day celebration near the endangered Pasig River in Manila.

PRB's *World Population Data Sheet* is used around the world and is widely considered to be the most accurate source of information on population. If you value the *Data Sheet* and are among the tens of thousands of people who eagerly anticipate its publication each year, please consider making a contribution to PRB. Your donation will help ensure that PRB can maintain its commitment to keeping the *Data Sheet* as affordable as possible. Visit our website to donate now: [www.prb.org](http://www.prb.org).
